CONTENTS.

CONTRACTED ARITHMETIC METHODS: PAGE

Contracted multiplication and division 2
Difference of two squares 6
Binomial approximation 7
Extraneous aids in calculating 9

LOGARITHMS:

Theory of logarithms 10
The use of tables 19

THE SLIDE-RULE:

To read the rule 25
To use the rule 28

Multiplication 29
Number of digits in a product 31
The use of the cursor 32
The Pointed Cursor 33
The Goulding cursor 34

Division 36
Number of digits in a quotient 37

Combined multiplication and division 39
Number of digits in combined products and quotients 40

Proportion 43
To reduce to the decimal of a given quantity .. 47
To find a vulgar fraction = a given decimal .. 48
Percentages 49

Useful Commercial Applications.
Wages, conversion of money values, etc. 51
Interest 52
Railway clearing-house work 52

PAGE

THE SLIDE-RULE—*continued.*

Reciprocals 53
Reduction and Conversion 54
Table of constants for 56–60

Powers and Roots.
Squares and square roots 61
Rule for number of digits in ditto 62
Cube of a number 64
Cube root of a number 64
Fourth roots 66
Powers and roots by logarithms 67

To read logarithms on slide-rule 67
Perry's Log Log Scale 69
Use of the upper scales 71

Combined use of all the scales 73
Products of the form $K N^2$ 73
Products of the form $K \sqrt{N}$ 74
Expressions of the form $K N^2 \div m$ 75
Expressions of the form $K \sqrt{\frac{m}{n}}$ 75
Products of the form $K \sqrt{N^3}$ 76
Products of the form $K \sqrt[3]{N^2}$ 77

Sines and tangents of angles.
Sine of an angle less than 90° 77
Tangent of an angle between 5½° and 45° 79
Tangent of an angle between 45° and 90° 80
Cosines, Cotangents, Secants, &c. 80
Tangent or sine of a small angle 81
Chord of an arc 83

Solution of triangles 83
Plotting surveys 87
Useful table of relations of sine, cosine, etc., of angles up to 360° 88

Circular Slide-Rules 89
Professor Fuller's Spiral-scale Slide-rule 91
Instructions for use of above 92

PAGE

EXAMPLES.—THE USE OF FORMULÆ:

Circumference of circle 94
Degrees to radians 95

Areas and Volumes
Area of a triangle 96
Area of a regular polygon 97
Table of constants for above 98
Area of ellipse 98
Volume of cylinder or prism 99
Weights of bars, &c. 99
Table for finding ditto 99, 100
Volume of a sphere 100
" " right cone or pyramid 101
" " the frustum of a cone or pyramid .. 101

EXAMPLES IN MECHANICS AND ENGINEERING:

Summation of vector quantities 102
Efficiency of machines 103
Reactions at ends of loaded beam 103
Speeds of pulleys and toothed wheels 104
Gear of bicycles 105
Laws of falling bodies 105
Acceleration, force, and mass 106
Momentum 107
Kinetic energy (translational motion) 108
" " of rotating bodies 108
Design of fly-wheels 109
Indicated Horse-power 111
Brake Horse-power 112
Stress and strain in tie-bars 113
Strength of boilers 114
" thick pipes 115
" belts 116
" shafts 117
Stiffness of shafts 119
Strength of hollow shafts 120

		PAGE
EXAMPLES IN MECHANICS AND ENGINEERING—*continued.*		
BEAMS:	Strength of beams (rules, etc.)	121
	" " (examples)	123
	Relative strengths and stiffness of beams (table)	122
	Plate girders, rule for strength of	124
	Stiffness of beams	124
	Teeth of wheels (strength of)	124
STRUTS:	Wrought-iron struts (Rankine's rule)	126
	Cast-iron struts	127
	Wooden struts	128
SPRINGS:	Spiral springs	129
	Carriage springs	130
Units employed in engineering examples		131
HYDRAULICS:		
	Head and pressure	133
	Rate of flow	133
	Gauge notches	134
	Friction in pipes	135
	Pressure of a jet	135
	Power of Pelton wheels	136
	Cost of hydraulic power	136
	Pump horse-power	137
EXAMPLES IN ELECTRIC TECHNOLOGY:		
	Ohm's law	138
	Resistance (insulation)	139
	" (of cable)	141
	Pull of magnet (Maxwell's law)	141
	Ampere-turns on magnet	141
TABLE OF LOGARITHMS AND ANTI-LOGARITHMS		142–145
INDEX		147
