

CONTENTS

PREFACE iii

**1. INTRODUCTION: LOCATION
OF DECIMAL POINT 1**

- 1.1 Introduction, 1 1.2 Slide rule does not
ordinarily locate the decimal point, 2
1.3 Locating the decimal point by inspection, 2
1.4 Shifting decimal point in products and
quotients, 4 1.5 Expressions involving
several numbers, 6 1.6 Scientific notation, 9
1.7 Laws of exponents, 9 1.8 Approximation
using scientific notation, 9

**2. READING THE C
AND D SCALES 13**

- 2.1 Physical parts of the slide rule, 13
2.2 Uniform and nonuniform scales, 13
2.3 Description of the C and D scales, 14
2.4 Scale setting independent of decimal point, 15
2.5 Reading the C and D scales, 15
2.6 Accuracy of the slide rule, 16 2.7 Reading
the L scale, 17 2.8 Using the L scale to
check C and D readings, 18

- 3. MULTIPLICATION AND DIVISION
(C AND D SCALES) 20**
- 3.1 Slide rule adds and subtracts lengths, 20
 3.2 Multiplication of two numbers, 20
 3.3 Either index may be used, 22
 3.4 Excessive extension of slide should be avoided, 25 3.5 Division, 27
- 4. COMBINED OPERATIONS WITH
C AND D SCALES 31**
- 4.1 Alternating division and multiplication most efficient, 31 4.2 Alternating pattern not always possible with C and D, 34
- 5. THE INVERTED SCALE (CI) 37**
- 5.1 Description of the scale, 37 5.2 Using the CI scale to find reciprocals, 37 5.3 The DI scale, 38
 5.4 Using the CI scale for division, 39 5.5 Using the CI scale for multiplication, 39
- 6. COMBINED OPERATIONS WITH
C, D, AND CI SCALES 42**
- 6.1 Application of the CI scale to continued division, 42 6.2 Application of the CI scale to continued multiplication, 44 6.3 Procedure when the next setting is off-scale, 47
- 7. THE FOLDED SCALES
(CF, DF, CIF) 49**
- 7.1 Description of the scales, 49
 7.2 Multiplication on the folded scales, 49
 7.3 Multiplying a number successively, 50
 7.4 Dividing a number successively, 51
 7.5 Other operations involving the folded scales, 52 7.6 Multiplication and division by π , 58 7.7 Formula types, 60

- 8. RATIO AND PROPORTION** 64
- 8.1 Definitions, 64 8.2 Proportional settings on the C-D (CF-DF) scales, 64 8.3 Conversion of units and other applications, 69
- 9. SQUARES AND SQUARE ROOTS (A, B, R, SQ, AND $\sqrt{\quad}$ SCALES)** 72
- 9.1 Description of the A and B scales, 72
 9.2 The double-length scale (R, Sq, or $\sqrt{\quad}$), 73
 9.3 Squaring a number, 73 9.4 Finding square root of a number between 1 and 100, 74
 9.5 A general procedure for square roots of numbers greater than 1, 75 9.6 General procedure for square roots of numbers less than 1, 77 9.7 Powers of 10 method, 78
 9.8 Formula types, 80 9.9 The quadratic formula, 83
- 10. CUBES AND CUBE ROOTS (K AND $\sqrt[3]{\quad}$ SCALES)** 84
- 10.1 Description of the K scale, 84
 10.2 Cubing a number using the K scale, 85
 10.3 Finding cube root of a number between 1 and 1000, 86 10.4 General procedure for cube roots, 87 10.5 Powers of 10 method, 88
 10.6 Finding $(N)^{3/2}$ and $(N)^{2/3}$, 90 10.7 The triple-length scale ($\sqrt[3]{\quad}$), 91
- 11. COMBINED OPERATIONS WITH SQUARES** 93
- 11.1 The A and B scales as operational scales, 93
 11.2 Simple operations with squares, 94
 11.3 Area of a circle, 96 11.4 Further operations with squares, 98 11.5 Formula types, 102

- 12. COMBINED OPERATIONS WITH ROOTS** 105
- 12.1 Simple operations involving the square root, 105 12.2 Further operations with square roots, 109 12.3 Operations with cube roots and fourth roots, 115 12.4 Formula types, 118
- 13. REVIEW EXERCISES** 121
- 14. THE TRIGONOMETRIC FUNCTIONS (S, ST, AND T SCALES)** 125
- 14.1 Some important relations, 125 14.2 The sine (S and ST scales), 125 14.3 The complementary scale, 127 14.4 The cosine, 128 14.5 The tangent of angles less than 45° (ST and T scales), 129 14.6 The tangent of angles greater than 45° , 131 14.7 The extended T scale, 132 14.8 The cotangent, secant, and cosecant, 133 14.9 A summary of procedures with the trigonometric scales, 134
- 15. FURTHER OPERATIONS WITH THE TRIGONOMETRIC SCALES** 137
- 15.1 Angles greater than 90° ; negative angles, 137 15.2 The inverse trigonometric functions, 139 15.3 Combined operations with trigonometric functions, 141 15.4 Radian measurement, 144 15.5 Using the ST scale for radian conversion, 145 15.6 Formula types, 146
- 16. THE RIGHT TRIANGLE** 150
- 16.1 Relations between the sides and the angles, 150 16.2 Solution of the triangle using the function definitions, 151 16.3 Solution using law of sines, 152 16.4 A special method for the case with two legs given, 156 16.5 Complex numbers, 159

- 17. THE OBLIQUE TRIANGLE** 162
- 17.1 Relations between the sides and the angles, 162 17.2 Three parts must be known, 163 17.3 Complete solution using the law of sines, 163 17.4 The case with two solutions, 165 17.5 Application of the law of cosines, 166
- 18. LOGARITHMS TO BASE 10 (L SCALE)** 169
- 18.1 Description of the L scale, 169
 18.2 Finding logarithms to base 10, 169
 18.3 Finding the antilogarithm, 170
 18.4 Finding 10^x , 171 18.5 Formula types, 172
- 19. THE LOG LOG SCALES (LL); POWERS OF e** 175
- 19.1 The LL1, LL2, and LL3 scales, 175
 19.2 Finding e^x when x is positive, 175
 19.3 The "A-related" LLO and LLOO scales, 177
 19.4 The LLo1, LLo2, and LLo3 scales, 177
 19.5 Finding e^x when x is negative, 178
 19.6 An approximation for e^x (x near zero), 179
 19.7 Evaluating e^x for large positive or negative values of x , 179 19.8 Slide rules with 8 LL scales, 180 19.9 Exponent in combined form, 181 19.10 Hyperbolic functions, 182
 19.11 The Sh and Th scales, 183
 19.12 Finding logarithms to base e , 184
 19.13 Combined operations with $\ln N$, 186
- 20. POWERS OF ANY POSITIVE NUMBER** 188
- 20.1 Finding b^x (x between 1 and 10), 188
 20.2 The "scale-shift" principle, 192 20.3 A general procedure for finding b^x (x positive), 193
 20.4 The reciprocal property of the LL scales, 197
 20.5 Finding b^x (x negative), 198
 20.6 Evaluating b^x on slide rules with 8 LL scales, 199 20.7 Finding $b^{1/x}$, 200

- 20.8 More general powers of b , 202
 20.9 Numbers outside the range of the LL scales, 204

**21. FURTHER OPERATIONS
 WITH THE LL SCALES 205**

- 21.1 Solving for the exponent in simple powers, 205 21.2 Finding logarithms to any base, 207 21.3 The DF_M scale, 208
 21.4 Exponential equations, 209
 21.5 Formula types, 211

22. REVIEW EXERCISES 215

**APPENDIX A. SMALL ANGLES
 (LESS THAN 0.573°) 219**

- A.1 Angles given in degrees, 219
 A.2 Angles given in minutes or seconds, 220
 A.3 The "minutes" and "seconds" gauge marks, 220 A.4 Conversion to radians, 221

**APPENDIX B. NUMBERS OUTSIDE THE
 RANGE OF THE LL
 SCALES 223**

- B.1 Numbers beyond the range of LL3 or LLo3, 223 B.2 Numbers very near 1 (rules with 6 LL scales), 225 B.3 Numbers very near 1 (rules with 8 LL scales), 228

**APPENDIX C. THE "A-RELATED" LLO AND
 LLOO SCALES 230**

- C.1 Description of the scales, 230
 C.2 Finding e^x (x negative), 230
 C.3 Finding $\ln N$ (N less than 1), 231
 C.4 Finding b^x (x positive), 232 C.5 The "scale-shift" principle, 234
 C.6 Finding b^x (x negative), 235

APPENDIX D. THE LL SCALES (BASE 10); THE FOLDED SCALES (CF/M, DF/M)	237
D.1 The LL scales (base 10), 237	D.2 The reciprocal property, 238
D.3 The "scale-shift" principle, 238	D.4 The CF/M and DF/M scales, 239
D.5 Finding b^x , 242	
APPENDIX E. THE HYPERBOLIC SCALES (SH, TH); THE PYTHAGOREAN SCALE (P)	244
E.1 The Sh and Th scales, 244	E.2 The P scale, 246
APPENDIX F. SOME REPRESENTATIVE LOG LOG SLIDE RULES	248
ANSWERS TO EXERCISES	254
INDEX	289
